Professional Summary

- UI/UX and Interaction Designer who turns complex, high-stakes procedures into clear, step-by-step experiences for regulated and safety-sensitive environments. At Teva Pharmaceuticals, translated a 70+ step machinery-assembly SOP into a GMP-regulated AR workflow, designing around operator language, error prevention, and QA qualification. Previously designed high-fidelity Figma interfaces for a body-worn camera concept and developed features for an AR project for children with autism.

Software & Skills

- UI/UX & Interaction Design: User-Centered Design, Complex Workflow Design, Task Analysis, Information Design, Visual Communication, Instructional Content & Graphics, Usability Optimization, High-Fidelity Prototyping
- Design Tools: Figma (components & variants, prototyping), Adobe Illustrator, Adobe Photoshop
- 3D & Development: Unity, Unreal Engine, Maya, Blender, Substance 3D Painter & Designer, XR Experience Development
- Regulated Environment & Collaboration: GMP-Regulated Workflow Design, SOP & Technical Documentation, Workflow Implementation, Cross-Functional & Global Multi-Site Collaboration, Hardware Troubleshooting

Professional Experience

Application Developer - Site Project Lead, AR Project for Machinery Operation — *Davie, FL*
Engineering Department, Teva Pharmaceuticals — *May 2026 - Present*

- Designed an SOP-aligned AR assembly workflow for pharmaceutical production machinery on a vendor-provided platform, translating a 70+ step assembly SOP into clear and visual step-by-step guidance shaped around operators' terminology and the GMP-regulated production environment.
- Drove the project from initial exploration toward formal site implementation, coordinating Production, QA, IT, and global teams to align the workflow with operational requirements and existing machinery.
- Enhanced SOPs with annotated visual instructions to improve procedural clarity and workflow consistency for production operators.

UI/UX Designer - Body-Worn Camera (BWC) Interface Design — *Coral Gables, FL*
Human Centered Design Class Project, University of Miami — *Jan. 2026 - Mar. 2026*

- Designed 4 core UI experiences (login, home, covert mode, and privacy mode) for a 307px-wide wearable display, emphasizing visual hierarchy, intuitive interactions, and clear system feedback for high-stress field use.
- Prioritized safety-sensitive interactions by analyzing user tasks, operational constraints, and cognitive load, keeping critical recording and emergency functions accessible while minimizing interference from secondary features.
- Created many of the team's reusable Figma components and variants, and helped define layout rules, visual hierarchy, and interaction patterns for product-wide consistency.
- Standardized UI patterns across team-developed Figma prototypes by reviewing typography, component styles, spacing, and alert behaviors, improving design consistency and supporting collaborative implementation.

Technical Artist & Developer - AR Project for Children with Autism — *Coral Gables, FL*
The Virtual Experiences Simulation Lab (VESL), University of Miami — *Jun. 2025 - Aug. 2025*

- Redesigned a 6-screen onboarding flow into 3 screens (–50%), simplifying navigation and streamlining the user setup experience.
- Accelerated project delivery by 2 months by independently developing and integrating front-end and back-end features, including an interactive asset library for user customization and organization.

Awards

Environment Art Student Category Winner — *Aug. 2025 - Nov. 2025*
Leartes Studio - Veiled Realms Art Challenge

Education

Master of Fine Arts, Interactive Media | GPA: 3.96/4.0 — *Coral Gables, FL*
University of Miami — *Aug. 2024 - May 2026*
